SUMMARY

Full-stack software engineer with backend and cloud strength, developed over five years at Google across infrastructure, search, and Android, followed by freelance work shipping web and mobile products end-to-end.

SKILLS

Languages	Python, Java, TypeScript, JavaScript, Go, C++, SQL
Backend / Cloud	Kubernetes, Docker, Google Cloud Platform, Cloud Run, Cloud Functions, Node.js, Firebase
Data / Search	Elasticsearch, PostgreSQL, Firestore, pgvector
Frontend / Mobile	React, React Native, Next.js, Android

EXPERIENCE

Freelance Software Engineer

Berlin / Rio de Janeiro · 2021 – Present

- Build and ship production web and mobile apps for clients end-to-end. Node.js and Firebase backends, GCP serverless (Cloud Run, Cloud Functions), third-party integrations, admin tooling, and React / React Native frontends.
- Tech lead on a mobile app for a major cultural event, owning backend, data model, and integrations: a content feed, an events calendar with ticketing and third-party biometric verification, a media gallery with a custom ingestion service, and a Retool admin app for the client team.
- Designed and built end-to-end a repair and work-order management app for a team inside a global cosmetics company. In active use for over a year, processing hundreds of tickets, with role-based workflows, formula-driven budget generation, and image evidence handling.
- Delivered creative-technology and web work including a custom interactive site for an art-direction studio (snap-scroll choreography, JS, Vercel) and physical installations integrating TouchDesigner with custom hardware and sensors.

Software Engineer — Google, Android

London, UK · 2019 – 2021

- Co-developed a homescreen widget shipped as part of Android 12, integrating with platform systems for notifications, contacts, permissions, and privacy.
- Owned cross-team integration of a sensor-driven Digital Wellbeing feature using proximity and accelerometer signals, coordinating between the sensors, detection algorithm, and Do Not Disturb teams.
- Built a per-device testing suite and trained OEM partner QA teams overseas on the workflow.

Software Engineer — Google, Kaggle

Seattle, WA · 2017 – 2019

- Led migration of Kaggle search from Azure Search to Elasticsearch on Kubernetes as part of the post-acquisition move to GCP, including technology selection, production indexing, and backend support for a redesigned search experience.
- Designed and built private-content search with owner- and role-based access across shared content and groups.
- Restructured the user account state model, becoming owner of account-related engineering work.
- Led GDPR compliance work across legal, design, and engineering, reimplementing account and privacy pages in React.

Software Engineer — Google, Cloud Dataflow / Apache Beam

Seattle, WA · 2016 – 2017

- Built a Go agent for the Dataflow worker logging pipeline, running on every GCE VM in the Dataflow worker fleet: startup, journald integration, and log flushing during crash scenarios.
- Developed Java SDK functionality for the open-source Apache Beam project, porting from the Python SDK.

EDUCATION

University of Michigan — B.S.E. Computer Science

Ann Arbor, MI · 2016

Magna cum laude · University Honors · Dean's List
